Oregon Iron Works.

Portland, March 31st/₄ 1866.

Gen. Palmer

Duyton Or.

Sir:

I saw the specimens of Fossil remains
of some monster animal at A. G. Brantford's which
you have recently unearthed, and as I am acquainted
with the Professor of the Rochester University, which insti-
tution has the largest collection of specimens in Natural
Science of in this country, I should be pleased -
if agreeable to you - to send him specimens -

I also learn from the papers that you have un-
covered a bar of Iron about 6 ft. long and 6 in.
diam: which if no plausible reason can be given
for its being found in the place indicated is a
most wonderful discovery -

Very truly yours

W. Bloomfield
