WATER CALENDAR

No. 3

June 1993

SC-93/WS.33

This Water Calendar contains meetings of COWAR encompassing the following organizations

| | |
|--|-------|
| - International Association of Hydrogeologists | IAH |
| - International Association for Hydraulic Research | IAHR |
| - International Association of Hydrological Sciences | IAHS |
| - International Association on Water Quality | IAWQ |
| - International Commission on Irrigation and Drainage | ICID |
| - International Commission on Large Dams | ICOLD |
| - International Union of Pure and Applied Chemistry | IUPAC |
| - International Water Resources Association | IWRA |
| - International Water Supply Association | IWSA |
| - Permanent International Association of Navigation Congress | PIANC |
| - International Association of Theoretical and Applied Limnology | SIL |

The Committee on Water Research (COWAR) was created by the International Council of Scientific Unions (ICSU) in 1964. At the 16th ICSU General Assembly in 1976 a proposal was adopted that COWAR become a Joint Committee of ICSU and UITA (the Union of International Technical Associations and Organizations). Appropriate ICSU and UITA bodies appoint members providing a mix of science and engineering.

The Water Calendar is a contribution of the above associations to the IHP. The Calendar is edited and produced by the IHP Secretariat. Individual copies can be obtained free of charge either from the:

PREFACE

Conscious of the need to encourage the exchange of information in both developed and developing countries, and following the recommendations of its Member States, UNESCO's International Hydrological Programme (IHP), during its fourth phase, decided to put particular emphasis on the management of water-related information.

The goal of the IHP project on water-related information is to provide and promote methodologies and assist in the establishment and development of water-related information systems at national and international levels, in order to render accessible existing information necessary for the study of water resources.

In this framework the IHP collects, publishes and distributes information on national and international water-related meetings in the form of a calendar which will be issued twice a year.

This calendar is a contribution of the water-related non governmental organizations joining forces under the Committee on Water Research (COWAR), which was created by the International Council of Scientific Unions (ICSU) and the Union of International Technical Associations (UITA) in 1964. The role of COWAR is to promote necessary contacts between the professional international non governmental water-oriented organizations, and to stimulate interrelationships and integrative approaches where society asks for combined involvement of various specializations.

A data base has been set up using the UNESCO Computerized Documentation Systems /Integrated Set of Information Services (CDS/ISIS). CDS/ISIS is able to build and manage structured non-numerical data bases whose major constituent is text. The CDS/ISIS package is distributed free of charge by UNESCO. For the time being, the calendar will be distributed in the form of a printed document, but it is planned that it will be accessible at a later stage through networks on-line.

The Water Calendar will be published twice a year .

The International Hydrological Programme, working simultaneously through national governments and through the scientific community, is well placed to contribute to the solution of the world's environmental problems.

It promotes the research that gives understanding of basic hydrological principles and processes, and it then supports the use of this knowledge in ways that lead to more rational management of the earth's freshwater resources.

These are necessary first steps in achieving sustainable development and the promise of a better life for all.

For further information about the International Hydrological Programme and how you might participate in its efforts, please contact:
