Negatives

Prints of Each

Use Kodak Verichrome Film ...

Verichrome is double-coated . . . helps prevent underexposure and overexposure...double-guards snapshot success. Halation "fuzz" is eliminated by a colored backing on the film, and as Verichrome is translucent, its superiorities can be seen by a glance at the negative. We also have Kodak "SS" Pan Film. It's three times as fast as ordinary film under artificial light.

BUSHNELL - PERKINS STUDIOS

ASHLAND — OREGON

Photo Finishing Is Our Specialty—

You Will Be Delighted with Our New Finish

It Is Different

Let us:

MAKE YOU EXTRA PRINTS

For friends who shared your good times — for far-away relatives — for your album.

ENLARGE YOUR FAVORITES

Our work is careful—brings out all the fine points. Prices are moderate, too. Ask to see our samples.

SHOW YOU OUR ALBUMS

An album will keep your precious prints in order—safe from loss or damage. Many styles, in a wide variety of prices. Let us show you.

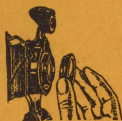

We Suggest:

PICTURES AT NIGHT

They're surprisingly easy to make now—with the fast Kodak "SS" Film and Mazda photo bulbs. Ask us about them.

"CLOSE-UP" PICTURES

All you need do is place a Kodak Portrait Attachment over the regular lens of your camera. Then take the picture.

PICTURES OF YOURSELF

If there's a cable release on your camera, you can take your own picture by using a Kodak Self Timer. It's easy—and lots of fun—try it.
